Experience

Application Security Intern

Barracuda Networks (Sep-2025 to Mar-2026)

Worked in the Application Security (AppSec) team, contributing to backend development and performing vulnerability assessments on web applications, identifying issues such as XSS and insecure headers. Conducting reconnaissance to identify technology stacks and assess security risks, while collaborating with product managers to improve application security posture and contributing to 5% increased customer engagement. Additionally, explored GenAI concepts including prompt engineering, MCP, and frameworks like LangChain, LangGraph.

Summary

Full-stack developer with a strong foundation in data structures and application security. Experienced in backend development, vulnerability assessment, and cloud-based systems (AWS). Solved 150+ LeetCode problems. Interested in AppSec, AI, and building scalable, secure applications.

Technical Skills and Interests

Languages: C, C++, Python.

Courses: Data Structures and Algorithm, DBMS, Computer Network, Linux, SQL ,docker

Cloud (AWS): EC2, S3 Bucket, IAM, Lambda, VPC,CloudWatch.

Areas of Interest:Full-Stack Web Development, Artificial Intelligence (LangChain, LangGraph, MCP, RAG).

Education

Basaveshwara Engineering College, Bagalkot

Graduation: 2026

Bachelor of Engineering in Information Science and Engineering

CGPA: 8.80

Dr. R. B. Patil Mahesh PU College, Hubli

Completed: 2021

Karnataka Pre-University Education Board

Percentage: 91%

Projects

Vulnerability Assessment project

2025 – Barracuda

- Web-based vulnerability assessment platform designed to identify security issues using non-intrusive scanning techniques.
- Tools & Technologies: Python, Django, React.js, REST APIs, OWASP guidelines.
- Implemented security checks for misconfigurations, weak security headers, exposed services, and application-layer vulnerabilities with detailed risk and remediation reports.

AI-Based Log Analysis Chatbot

2026 – Barracuda

- AI-powered log analysis system to process and analyze large-scale application logs for security insights.
Technologies: Python, ClickHouse, SQL, MCP.
- Utilized AI to generate OpenAPI specifications, automating API documentation and enhancing API analysis.

Secure Multi-AZ VPC Deployment using Private Subnets and NAT Gateway

2025 – Bagalkot

- Designed a highly available VPC architecture with multi-AZ deployment to ensure resiliency
- Set up Auto Scaling with an Application Load Balancer for efficient traffic handling
- Secured infrastructure with private subnets and NAT Gateways for safe server internet access
